DB(SIZE)

30 mil matte material.

Available in white only.

Important Magnetic Clean and Care Instructions:

"Our customers tell us that it is extremely important to make sure the vehicle surface is clean and moisture free before applying any magnetic. It is recommended that the vehicle surface be waxed and allowed to cure for at least 48 hours before applying magnetic. For new or newly painted vehicles allow 90 days before applying any magnetic. If you are painting the magnetic it is usually not necessary to prep the surface, but please pre-test for adherence before painting any magnetic. Failure to remove and clean both the magnetic sign and vehicle surface on a daily basis could result in permanent damage. CAR-SAFE™ is safer, but still requires the same cleaning recommendations."
